Safety Warnings

This software is intended for use under the direct supervision of a licensed healthcare practitioner.

The use of this software is intended to complement the functions of medical monitors and other devices, and not to prevent critical care personnel from attending to information and alarms generated by this equipment.

Convenience outlets and all other electrical outlets that may be used for the patient must be on the hospital emergency circuit so that they are energized at all times.

Failure on the part of the responsible individual, hospital, or institution employing this software to implement a satisfactory scheduled maintenance program may cause undue software malfunction (a full hard disk, for example) and possible health hazards.

Picis is responsible for the effects on safety, reliability, and performance only under the following circumstances:

- Code generation, extensions, readjustments, modifications or software changes are carried out by persons authorized or certified by Picis.
- The electrical installation of the relevant room complies with the requirements of appropriate regulations.
- The software is used in accordance with instructions for use.

HIPAA Compliance

Picis has put considerable effort into providing the capability to protect and audit access to patient personal health information in its products. It is highly recommended that those responsible for implementing the software fully utilize the delivered security functionality in order to ensure that only authorized users have access to the data. Picis supports configuration that will permit authorized users to restrict access to certain features and functions, to allow view-only rights to protected information and to define editing rights. Also, native audit features and reports can be utilized periodically in order to monitor changes or particular instances of access to data.

Program Overview

Security Manager Uses

The uses of Security Manager are as follows:

- **Use application code:** Application code controls user from changing the value in a system function and other similar use is working with the Java API. Security Manager allows application to restrict the use.
- **Create entries in the program database with self, blocking type, self type:** Security Manager and the application and restriction rights can be created and then access control.
- **Manage user access to all runtime applications:** Create user and groups of user, configure the runtime applications that user and groups can self and use, configure the runtime user with each application that user and groups can use.
- **Create entries in the program database:** The program database holds the program and restrictions, user can be selected that they have use in runtime applications. Entries can be runtime user or self and name that appear in the runtime code.
- **Associate self-name with a self type and user number of blocking type:** The association affects the self name that appear in runtime application code.
- **Control user ability to generate and execute dynamic code:** Control that user dynamically change. After change is control that change and rights to generate dynamic code and document whether they have been approved in the system.
- **Manage resources:** For resource restriction and usage resources separately individually or in group.

Freeing Application Locks

From Windows Security Center Free Application Locks

The following steps show you how to do the following:

- a. Search for an application lock. The search begins as you start typing.
- b. Set the lock to search by location and also sorted by the date.
- c. Free all locks. The lock automatically moved to the search bar will be selected. This action will be applied to all locks.
- d. Refresh to see the latest locks.
- e. Select the lock that you want to remove and then click **Free Locks**.

An application is said to be "locked" if a function cannot be carried out by the user through another app or sometimes even the system app is completely blocking the system apps in the system. The following are all sorts of conditions that are locked if a particular function, with access of the user and completely blocking the lock.

Now that application locks in Windows Security can also be found in the **Windows Security** menu in the program.

When you free a lock, any content change made by the user during the lock will be lost.

How to...

Search for an application lock

- a. In the **Windows Security** menu, click **Free Application Locks**.
- b. Under **Application Locks**, choose an application and then click **Free**.

1. Click **Search** to see the latest application notes.
2. Click **Keywords** in the left pane to see the search results.
3. Click **Find** under the text to search for.

(The search engine is used to find what you type.)

Find an application note

1. Go to the **Resources** menu, click **Find Application Notes**.
2. Under **Application**, choose an application and then click **Find**.
3. Click **Search** to see the latest application notes.

Select the application note you want to view.

To select a group of application notes, you can hold down the shift or control key while clicking. **Ctrl** allows you to make separate selections. **Shift** allows you to select one separate note.

4. Click the results.

Workflow for Giving Users Access to an Application

The workflow for giving a user access to an application is as follows:

1. Create roles or self-service entitlements, if necessary.
2. Create a custom role and assign a permission set.
At this stage, you also specify the user's self-type and sharing type.
3. Add the user to a group, if necessary.
Adding users to groups allows you to assign the same application rights to many users at once.
4. Assign the user to a group that can access the application.
(The system to which the application can be used depends on the settings made in the last step.)
5. Specify the functionality within the application that the user or group can use.

Example: If a group may need to be able to view spending report information, but only certain group members are authorized, should be allowed to edit or manage them.

The user can now log in to the application and use it within the configured limitations. The first time the user logs in to any Salesforce application, they will be asked to change their password, selected by a permission set. If the change password task set used the system password requirements a warning message will indicate the strengthening and allow the user to enter a valid password.

Exercises

Exercise 10.1

1. Create an application icon in the Storage
2. Test the application icon and the icon

Staff-related Dictionaries

Workflow for Assigning Clinical Roles to Users

Workflow for assigning clinical roles to users

1. Create standing topic.
2. Create clinical role. For each clinical role, define associated standing topic.
3. Create users and give them standing topic. When you do this, you are effectively assigning clinical role(s).

Workflow

Assigning Clinical Roles to Users

The workflow for assigning clinical roles to users is as follows:

1. Create standing topic.
2. Create clinical role. For each clinical role, you define the standing topic associated with it.
3. Create users and assign them standing topic. When you do this, you are effectively assigning clinical role(s).

Monitor Data: 10. Open the field to a suitable user defined term as described in the **SP Manager User Guide**.

Step 11: Open the Step Sheet list in SP Manager

1. Open the form you wish to edit.

2. Open the Step Sheet list.

Warning: You will see the names of all SP where affecting forms are associated with one or more of the chosen rules that were defined for this list.

Clinical Role Usage in Prep Manager and Anesthesia Manager

Clinical role and attending user are used in Prep Manager and Anesthesia Manager as follows. The example below illustrates the medical team user and role options.

- If clinical role is selected by the user.
- After selecting the clinical role, a staff user must be selected by choosing a user in the user list. The list only displays users that have attending user associated with the selected clinical role.
- In some cases, a staff user may have more than one attending user that is associated with the chosen clinical role. In these cases, staff users can specify which of these attending users is related to the particular case. These will allow only the user.

Attending Type Dictionary

From **Attending Type Dictionary** (Attending Type Dictionary)

The Attending Type Dictionary allows you to do the following:

- View all attending types
- Modify the name of a selected attending type
- Create new attending types

When creating attending types, you can assign them to user roles. "Create a new profile" on page 101 and associated them with a user role. "Create a new role" on page 101.

See also **Full Type**, **Attending Type** and **Global Role** on page 101.

Note: The attending type **Trainer**, **Trainer** and **Trainer** cannot be added or modified.

How to...

Create an attending type

1. In the **Attending Type Dictionary** (Attending Type Dictionary)
2. Click **+**
3. In **Attending Type Description**, enter the attending type name.
By default, the name will be added.
4. Click **Save**

Scenario Modify an attending type

1. Go to the **Workspaces** menu, click **Attending Type Dictionary**.
2. Select an attending type.
3. In **Attending Type Description**, edit the attending type name, if necessary.
4. Use **Active** to activate or deactivate the attending type, if necessary.
5. Click **Save**.

Scenario View the Attending Type dictionary

1. Go to the **Workspaces** menu, click **Attending Type Dictionary**.
2. Click **View**.
3. Click **View**.

Clinical Rules Dictionary

From **Dictionary** > **New Clinical Rule**

The **New Clinical Rule** screen can be used for the following:

- View all clinical rules.
- "Select" a clinical rule from the listbox to view the alerting types associated with that rule.
- Modify the response for a clinical rule that appears in the listbox and its description.
- Associate alerting types with the selected clinical rule.
- Create new clinical rules.

See also "Alert Type, Alerting Type and Clinical Rule" on page 11.

Note that the clinical rules (rules) and associated rules (rules) cannot be deleted or modified. Note also that the alerting types (rules) and alerting types are associated with these rules and cannot be deleted from them.

How to...

Create a clinical rule

1. Go to the **Dictionary** > **New Clinical Rule**.
2. Click **New**.
 - By default the new rule will be added.
3. In **Response**, enter a short name for the clinical rule.
4. In **Description**, enter a description of the clinical rule that only appears in Security Web app.

1. In the **Working Type** field, the name used in the working type that you want to associate with the virtual role.
2. Click **Done**.

Verify a virtual role

1. Go to the **Workspaces** menu, click **Virtual Role**.
2. In the left pane, select a virtual role and then click **Verify**.
3. In **Elements**, add the check names for the virtual role, if necessary.
4. In **Properties**, add the description of the virtual role, if necessary.
5. In the **Working Type** field, the name used in the working type that you want to associate with the virtual role, and also those that you no longer want to associate with the virtual role.
6. Click **Done**.

Delete a virtual role

1. Go to the **Workspaces** menu, click **Virtual Role**.
2. In the left pane, select a virtual role and then click **Delete**.
3. When prompted, click **Yes**.
4. Click **Done**.

Reset the Virtual Role dictionary

1. Go to the **Workspaces** menu, click **Virtual Role**.
2. Click **Reset**.
3. Click **Done**.

Staff Type Dictionary

From **Staff Types** - **Current Staff Type Dictionary**

The following are actions you can do for the following:

- a. View all staff types
- b. Modify the name of a selected staff type
- c. Modify the public and private associated with a staff type
- d. Create new staff types

After creating staff types, you can assign them to users from "Create a user profile" on page 10.

See also Staff Type, Managing Type and Related Staff on page 10.

How to...

Create a staff type

- a. In the **Staff Types** menu, click **Staff Type Dictionary**
- b. Click **add**
- c. In **Staff Type Description**, enter the staff type name.
By default the public and private are set.
- d. In **Public**, enter a public such as "10" if applicable
- e. In **Private**, enter a private such as "100" if applicable
- f. Click **Save**

Identify a staff type

- In the **Workcenter** menu, click **Staff Type Dictionary**.
- Select a staff type.
- In **Staff Type Description**, edit the staff type name, if necessary.
- Click **Setting** to activate or deactivate the staff type, if necessary.
- In **Profile**, enter a new profile, if necessary.
- In **Profile**, enter a new profile, if necessary.
- Click **Save**.

Print the Staff Type dictionary

- In the **Workcenter** menu, click **Staff Type Dictionary**.
- Click **Print**.
- Click **Print**.

Prescription and Validation Rights Dictionary

Prescription and Validation Rights Dictionary

The following table shows you how to do the following:

- a. View all prescription rights and validation rights
- b. Modify a validation right
- c. Create new rights

These rights control access to treatment and access to the database for users of Healthcare Manager, HRIS Manager, and Patient Care Manager. Each treatment and order in the database has two authorization/validation rights associated with it:

- a. One for prescribing (adding the order to the patient chart)
- b. One for validating (determining that a new order is appropriate to the patient)

The rights are in four groups or groups sets: Therapeutic Management, Healthcare Management, HRIS Management, and Patient Care Management. These groups are described in page 10. Members of the group can perform the corresponding action for all treatments associated with the same right. The user can authorize/validation rights in two ways:

- a. To grant access to treatment in order to prevent users from being able to work with them
- b. To associate treatments with types of clinicians in order to make all other treatments for those clinicians

The workflow for creating and assigning these rights is as follows:

- a. Rights are created in the Prescription/Validation Rights Dictionary using Healthcare Manager. At this step, they are newly created with no treatment significance.
- b. The relevant rights are assigned to groups and users using Healthcare Manager.
- c. The same rights are associated with the relevant order in treatment using HRIS/HRIS.

Correct

Create a prescription or variation right

- ☐ In the Medication row, use Prescription Variation Right dropdown
- ☐ Yes No
- ☐ In Description, enter the name of the prescription or variation right.
By default the entry will be active.
- ☐ Yes No

Correct

Modify a prescription or variation right

- ☐ In the Medication row, use Prescription Variation Right dropdown
- ☐ Select a prescription or variation right
- ☐ In Description, add the name of the right, if necessary
- ☐ Use Active to activate or deactivate the right, if necessary
- ☐ Yes No

Correct

Print the Prescription and Variation Rights document

- ☐ In the Medication row, use Prescription Variation Right dropdown
- ☐ Yes No
- ☐ Yes No

• • •

Prescription and Validation Rights Usage

The usage of prescription and validation rights is used to monitor the usage of rights.

In the table: is the status of the rights, as follows:

Prescription Rights: is the status of the rights.

Validation Rights: is the status of the rights.

Right status: is the status of the rights, as follows:

In the table: is the status of the rights, as follows:

Usage	Rights
Active	Prescription Rights Validation Rights
Inactive	Validation Rights

Notes

In the table: is the status of the rights, as follows:

- The status of the rights is used to monitor the usage of rights.
- The status of the rights is used to monitor the usage of rights.

Users and Groups

Managing Users and Groups

Task 1: Manage Users and Groups

The following table shows you how to do the following:

1. Search for a user. The search begins as you start typing.
2. Tap the filter to search by criteria and also sorted by the field.
3. View all users. The user you currently view is in the search bar and will be selected. Then another user is added to select.
4. The bottom left pane shows the group to which the selected user belongs. If any.
5. Search for a group. The search begins as you start typing.
6. Tap the filter to search by criteria and also sorted by the field.
7. View all groups. The group you currently view is in the search bar and will be selected and the user will select all the group. Then another group is added to select.
8. The bottom right pane shows the user belonging to the selected group.

When the console displays information, the term "user" in this document means you will have that appears in the first column. As for the user is one of these categories or groups, a group is a group of users and groups and a group is a group of users and groups.

Visual Indicators

1. An indicator icon in a user indicates that the user belongs to a group.
2. A user icon indicates that a user will be in a specific application or application rather than just appearing in the search bar.
3. A group icon indicates that a user has been made visible. The user is in a group and is in a specific application or is added to the search bar.

Groups

Users can be independent or can belong to one group that can have other users. The advantage of adding users to groups is that access rights to hardware applications can be effectively assigned to all members of a given group simultaneously. This makes the hardware security system much easier to set up and maintain. A user who is a member of a group will have rights associated with himself or herself, but these personal rights are only used if and when the user is removed from the group. Otherwise the personal rights are ignored and only the group rights are utilized.

If a user does not belong to any existing group, this means that that user group is needed so that user will have rights as assigned to the group, and the user will be part of any existing user member.

Note that users can only belong to one group. For example, if you have a group for all Managers, users who require the Application Manager users can still exist in additional group for users that need access to both programs.

Managing Users and Groups (continued)

How to: Add a user to a group

When you open the **Group Management** page, you can add a new user to a group. To add a user to a group, click the **Users** button in the left sidebar. In the **Users** pane, you can add a new user to a group, or you can add a user to a group. To add a user to a group, click the **Users** button in the left sidebar. The right sidebar shows a list of users and groups. To add a user to a group, click the **Users** button in the left sidebar. The right sidebar shows a list of users and groups. To add a user to a group, click the **Users** button in the left sidebar.

How to:

Find a user

1. In the **Users** pane, click **Users**.
2. Click the **Users** button in the left sidebar.
3. Click the **Users** button in the **Group Management** pane, under the **Users** button.

Find a group

1. In the **Users** pane, click **Groups**.
2. Click the **Groups** button in the left sidebar.
3. Click the **Groups** button in the **Group Management** pane, under the **Groups** button.

Create a group

1. In the **File** menu, click **NewGroup**.
2. In the **File** menu, click **New Group**. (It uses the right-click menu.)
3. In **Group**, enter the name for the group with that group name cannot contain spaces.
4. In **Description**, enter a description for the group.
5. Click **OK**.

Edit a group description

1. In the **File** menu, click **NewGroup**.
2. Select a group in the left pane.
3. In the **File** menu, click **Edit Group Description**. (It uses the right-click menu.)
4. In **Description**, enter a new description for the selected group.
5. Click **OK**.

Show the users in a group

1. In the **File** menu, click **NewGroup**.
2. Select a group in the left pane.
The users in the bottom right will show all users belonging to that group.

Add a user to a group

1. In the **File** menu, click **NewGroup**.
2. Select a user in the left pane.
3. Select a group in the right pane.
4. In the **File** menu, click **Add User to Group**. (It uses the right-click menu.)
5. Click **OK**.
The selected user is added to the selected group.

You can also add users to groups by dragging them from the left pane and dropping them in the right pane.

Remove a user from a group

1. In the **File** menu, click **NewGroup**.
2. Select a group in the right pane.
The users in the bottom right will show all users belonging to that group.
3. Select a user in the users in the bottom right.
4. In the **File** menu, click **Remove User from Group**. (It uses the right-click menu.)

The selected user is removed from the group.

Creating and Editing Users

Figure 10-1 Windows Security console. Note that the left pane only appears when the console design dialog box is open.

The dialog box allows you to set the following:

1. **User ID.** This is a numeric user ID for the user and only appears in the console tab. The user ID is an alphanumeric string in the console dialog box. It is a numeric string with a number in the first four or five characters, a letter, and a suffix.
2. **Name of the user's name.** This is the name you use in File History, OneDrive, Storage Spaces, and other user-facing applications. It is a numeric string with a number in the first four or five characters, a letter, and a suffix.
3. **User status.** This is the status of the user.
4. **User status.** This is the status of the user.
5. **Name of the user's address.**
6. **The user's address type.**

The following table summarizes the user ID, first name, last name, and address type.

Permissions

The console uses permissions to control access to the console. Each user has a set of permissions that control the first time they log in to a console program with a password.

The user rights that control the console are permissions. You can add a new permission to the console.

The user rights that control the console are permissions. You can add a new permission to the console.

Pages

Share this

When you open a new profile with a **Pages** type of **Pages** membership, a **Page** for that profile is added to the **Pages** list. Along with the name and address details, "Page" is included in the list of all the other items in the list, but only the other pages in the list.

In the **Pages** list, a **Page** is added to the list. The **Page** is added to the list of "Pages" and the list of all the other items in the list.

When you open a new profile with a **Pages** type of **Pages** membership, a **Page** for that profile is added to the **Pages** list. Along with the name and address details, "Page" is included in the list of all the other items in the list, but only the other pages in the list.

The **Pages** type is primarily used to add the list of all the other items in the list. The **Pages** type is primarily used to add the list of all the other items in the list.

When creating a profile

When the **Pages** type is used, the **Pages** type of items in the **Pages** list. Along with the name and address details, "Page" is included in the list of all the other items in the list.

When using the **Pages** type of items in the **Pages** list, the **Pages** type is used.

The **Pages** type of items in the **Pages** list, the **Pages** type is used. Along with the name and address details, "Page" is included in the list of all the other items in the list.

When using the **Pages** type of items in the **Pages** list, the **Pages** type is used.

When creating a profile with a **Pages** type of **Pages** membership, a **Page** for that profile is added to the **Pages** list. Along with the name and address details, "Page" is included in the list of all the other items in the list.

When creating a profile with a **Pages** type of **Pages** membership, a **Page** for that profile is added to the **Pages** list.

The **Pages** type is primarily used to add the list of all the other items in the list. The **Pages** type is primarily used to add the list of all the other items in the list.

How to...

1. Go to the **Pages** section of the **Pages** list.
2. Go to the **Pages** section of the **Pages** list.
3. In **Page 1**, enter a **Page** name for the **Page**. After creating the **Page**, you will see the **Page** in the **Pages** list.
4. In **Page 2**, enter a **Page** name for the **Page**. After creating the **Page**, you will see the **Page** in the **Pages** list.
5. Enter the **Page** name, address, and other details of the **Page** in the **Pages** list. The **Page** is added to the **Pages** list and the **Page** is added to the **Pages** list.

- [illegible]

- [illegible]

- On the **File** menu, click **Workgroups**.
- Under **Workgroups**, select the workgroup you want to connect to.
- On the **File** menu, click **Save**.
- Enter a description of what the file is in the **Comment** field box.
- Click **OK**.

Exercises

Exercise 10.1

1. Identify a member of staff who is not a system user.
2. Identify the members of one group. How can you tell if somebody belongs to more than one group?
3. Using the web, identify that the user who is an administrator. How can this affect the system?
4. Create a new group for administrators.
5. Create a new user who is an administrator. What is one of the statements you might see you will need to add. What user who has a suitable staff type and is suitable allowing login that the right user.
6. Add the new user to the administrator group that you created.

Applications and Functions

Defining the Applications Available to Each UserGroup

Using Windows Settings to Define Applications

The following table shows you the following:

- How to select a user group. The user group is the user that you want to define the applications for.
- How to select the applications that are available to the user group.
- How to select the applications that are available to the user group.
- How to select the applications that are available to the user group.
- How to select the applications that are available to the user group.
- How to select the applications that are available to the user group.

There are two ways to select the applications that are available to the user group:

- To select the applications that are available to the user group, you can select the applications that are available to the user group.
- To select the applications that are available to the user group, you can select the applications that are available to the user group.

After setting the applications that are available to the user group, you can select the applications that are available to the user group.

Remember that you are not assigning the user right to start and use each application. You will also need to assign rights for each of the functions that the application performs.

Verify before the application is given user or group user role

1. In the **App menu**, click **ViewApplications**
2. If necessary, use the **App menu** to select the user or group.
(If you are using the search menu, it will be selected in the user table.)
3. Under **Permissions**, select the user or group that is not already selected.
4. Under **Applications**, select the specific applications that you want the user or group to be able to edit and use. (Click **Reset All** to select all applications. Click **Reset All** to deselect all applications.)
5. Click **Save**

Note that for certain specific applications, such as **File Manager**, **Workflow Manager**, **File Manager**, and **Workflow Manager**, you can only assign rights to groups, not individual users.

• • •

Defining the Users/Groups who can use an Application

From **Settings** > **System** > **Apps** > **Default Applications**, click **Application Settings**.

The dialog box allows you to do the following:

- Select an app to see the applications assigned to a given user or group.
- Select the application you are interested in.
- Search for a user or group. The search begins as you start typing.
- Set the list to search by either an app or user or group.
- View the users and groups who have rights to use the selected application. The only permissions listed in the search list will be selected. This enables users to select or remove the app user or group in the list. You can also give the right to use the selected application by clicking the check box next to their name.

How to...

 **Windows** How and modify the settings that can start and use a given application.

- In the **File** menu, click **Default Applications**.
 - From **File** > **Default Applications** is right in the **Application Settings** dialog box.
 - Under **Applications**, select a desktop application.
- The app user will be all users and groups who have been given the right to start and use the application.
- If necessary, use the **File** menu to search for a user or group from the dropdown list.

(If you start typing the check code, it will be entered in the page below.)

- To report the right group to a user or group to start with use the application, then the check code sent to the user or group.

• **Check Code**

Giving Users Access to Application Functions

From **Resources**, select **Give Access**.

The dialog box allows you to do the following:

1. Search for a user or group. The search begins as you start typing.
2. Set the field to search by: either use the setting in the field.
3. Select a user or group whose rights you want to view or modify. The only applications related to the user or group will be selected. (You cannot select to select a user.)
4. Select the application you are interested in. The actual list of applications you will see depends on the applications installed on your site.

Quick Configuration

Quick configuration lets you set a user or group's access to applications. The Quick Config is a dialog box that allows you to quickly select multiple configuration options.

If you want to grant a user or group access to the majority of items in a section, use **Quick Config** to select all of the items. You can also select to select the items you do not want to grant access to.

Note:

 Before the application functions a given user or group can

1. In the **Give Access** dialog box.
2. If necessary, use the **Quick Config** to select the user or group for whom you want to

1. The selected user will be selected in your table.
 2. Under **Permissions**, select the user or group that is not already selected.
 3. Under **Applications**, select the CloudBees application for which you want to define specific rights.
 4. Under **Role**,
 The dialog box that you see shows user defaults in the application you selected. The table contains a list of the dialog boxes and described below.
 5. You can set all of the dialog box to specific rights for the selected user or group. Then click **Save** to save the dialog box.
 6. When you have finished defining specific rights for users and groups for all selected applications, click **Save**.
-  Note that in order to set specific rights you have defined for a user or group, that user or group will only be able to login and use the application if they have the role grant that assigns rights to the application.

Security Manager Access Options Overview

The Security Manager can be used to manage user and group settings in the following ways:

- Add, edit, and delete users and groups
- Set user and group access to applications
- View and change password capabilities
- View the audit trail of changes made to users and groups

Specific settings are described in the Appendix.

DB Manager Access Options Overview

The DB Manager access options are as follows:

- Access to the database via the DB Manager console
- Access to the database via the DB Manager console
- Access to the database via the DB Manager console
- Access to the database via the DB Manager console
- Access to the database via the DB Manager console
- Access to the database via the DB Manager console
- Access to the database via the DB Manager console
- Access to the database via the DB Manager console

Specific settings are described in the Appendix.

SmartTrack Access Options Overview

The SmartTrack, you can control use in your ability to do the following:

- Change and view access information
- Use access rules, commands and toolbar buttons
- Use access graphs, tracking system and departments
- Use access tool management (uploading) functionality
- Use tool tool settings in the user in the Smart Management system
- Use access transport status functionality
- Use access ID department status functionality
- Use a configurable toolbar key to use a custom menu
- Generate reports

Specific settings are described in the Appendix.

Quality Manager Access Options Overview

The Quality Manager user can control user or group ability to do the following:

- Add, update, delete, and deactivate users
- Change and update system information
- Search and view specified user logs
- Edit specified user logs
- View user information
- View user information
- Create external reports

Specific settings are described in the Appendix.

BitLocker Manager Access Options Overview

The BitLocker Manager can use control over a group ability to do the following:

- The control view commands
- Change and control control information
- View and management and usage
- Full control options related to the control
- The functionality related to processing tasks
- Full control assessment and assessment information

Note that settings are configured for each device type.

Meeting Manager Access Options Overview

For Meeting Manager, you can control user access ability to do the following:

- Can control user comments
- Can security mode
- Transfer control
- Control status in all meetings
- Call or join user meeting

MultiTarget Access Options Overview

The MultiTarget user can control user or group objects in the following:

- Run update rules commands
- Change user and group object information

Make these settings are configured for each profile type:

Exercises

Exercise 10.10

If you click on the globe icon in the group, then the web page will load with all the group's own member pages, as follows:

Exercise 10.1

Group the page to use the following structure:

Exercise 10.2

Group the page to use the following structure of content when creating a new page:

Exercise 10.3

Group the page to use the following structure:

Exercise 10.4

Group the page to use the following structure:

Passwords

Implementing a Password Policy

Security Tools

Task 1b: Implement Password Policy

The following task allows you to do the following:

1. Specify that passwords must contain at least one letter and one number
2. Set the number of "password" passwords that the minimum is 4 days. (This password also affects existing passwords)
3. Set the time limit for temporary passwords. If the time limit has expired a user cannot log on, you must set a new temporary password for them
4. Set the minimum and maximum password length
5. Set the warning period before password expiration applies
6. Restrict the use of passwords that have been used before
7. Set security logs. Note that for all changes, the new value is defined by a number 0-9 in the settings

How to...

Implement a Password Policy

1. In the **File menu**, click **Open Password Policy**
2. Click **Require user to enter characters and numbers** if you want to enforce this policy
3. In **Password policy for 4 days**, enter the number of days that password expiration will be used for. (0-9) - 0 means not required. Minimum = 1. If you do not want the policy used to expire, enter the maximum number, 99999, which equals 99 years
4. In **Temp password expires after 4 days**, enter the number of days that temporary passwords will be used for. (0-9) - 0 means not required

- **Minimum segment length** - enter the minimum number of characters a segment can contain.
- **Maximum segment length** - enter the maximum number of characters a segment can contain.
- **Start Warning if flag is applicable** - enter how many days before a user's password is due to expire the warning string has should be shown to the user when they log in. Once the user changes their password the warning will be shown until their flag expires.
- **Maximum age of passwords** - enter an appropriate number. Set this value to 0 if you do not want to enforce any password age.
- **Clear flag**

Note that the Clear flag setting is not currently used.

Assigning Temporary Passwords 'en masse'

Security Tools

From Windows Security console: Assign Temporary

The dialog box allows you to do the following:

- All users are listed alphabetically by their user name.
- Filter the display of users in the left pane by clicking those that meet selected criteria (display permanent passwords, add permanent passwords, display temporary user name, add temporary passwords, or all users).
- Click the arrow button to change the user you want.
- Selected users are listed in the right pane.
- Assign a temporary password to all listed users.

How to...

Assign the same temporary password to multiple users simultaneously

- In the Windows Security console: Assign Temporary
By default, all users are shown in the Users list in the left pane.
- Click **Temporary password**. From the menu, corresponding to the type of user you want to add in the left pane of the console, click the user with the following:
 - display permanent passwords
 - add permanent passwords
 - display temporary passwords
 - add temporary passwords

• **Answer 101**

1. In the **Step 1** box, select **Yes** to make users and their roles in the system that is the **Selected System** for this right panel.
To adjust a group of users, you can hold down the shift or control key while clicking **OK**. When you're ready, select **OK** to make the changes.
2. To make all visible users in the **Selected System** box, click **Step 10**.
3. To remove any users from the **Selected System** box, select them and then click **X**.
To remove all users from the **Selected System** box, click **Step 10**.
4. Click **Step 10** to go to the next step in the process.
5. Click **Step 10** to go to the next step in the process.
6. Click **Step 10** to go to the next step in the process.
7. When you have finished managing accounts, click **Step 10**.

Exercises

Exercise 11

Design a new algorithm to all users whose name starts with the same letter as yours. Is this algorithm temporary or permanent?

• • •

Audit Trails

Viewing the Changes Made to Password Parameters

Task 10: Password Parameters Audit Tool

The goal was to view the changes made to password-related parameters in the Security Manager console.

1. Select the period of time that you want to view changes for. If you don't select a period of time, all data will be shown.
2. The report can be a single page or can span several pages, depending on the number of entries. An HTML report can span up to 100 pages. Use the arrow buttons to select the page you want to view.
3. Entries are listed chronologically. Besides the date and time, each entry includes details of the changes made and the user who made them.
4. Filter the report.
5. Change the font size. This setting also affects the printed report.
6. Save the report as one of many formats (e.g., HTML, CSV, PDF, Word, etc.).
7. Email the report as a message or attach it to an email.

The report shows the date and time each user made, what was changed and who made the change for each page ID.

How to...

 How the changes made to password parameters

1. In the **Windows Security** console, click **Password Parameters Audit Tool**.
2. In **Filter** and **Page**, select the period to be covered by the report.

- [illegible]

Viewing the Changes Made to Users and Groups

Task 10: View the Security Event Viewer

The Security Event Viewer will help show you the state of the changes made to user and group settings in Security Manager. That is, all you see the information you want to see in the Event Viewer.

- The user select a range of user types for the which you want to view changes. The changes made to these users, and the changes made to these. If you don't select a range of users, then the all users will be shown.
- Select the period of time that you want to view changes for. If you don't select a period of time, all data will be shown.
- Specify whether you want to view details for user users, and groups, or both users and groups.

Viewing the Changes Made to Users and Groups (contin-ued)

The report shows the changes made to users and groups within the date and time span that you specify. When you change the date and time span, the report will show the changes made to users and groups within the specified date and time span.

- The report can be a single page or a multi-page report depending on the number of entries. An entry is a row in the report table. When the report has more than one page, the report will show the first page and the last page.
- When you view the report, the report will show the date and time span that you specify. When you change the date and time span, the report will show the changes made to users and groups within the specified date and time span.
- Print the report.
- Change the report view. This will affect the printed report.
- Save the report in one of the report formats (e.g., HTML, PDF, Word, etc.).
- Close the report. The report will be closed and the report will be printed.

How to...

 **View the changes made to users and groups**

- In the **File** menu, click **Reporting Tools**.
- Click **Report**. When the report is open, the report will show the changes made to users and groups. In the **Report** menu, click **View** to view the changes made to users and groups.
- In the **View** menu, click **HTML**. When the report is open, the report will show the changes made to users and groups. The report will show the changes made to users and groups within the specified date and time span.

- In **Open SQL Data** and **SQL Data**, select the content to be covered by the report. If you prefer to use the standard, select the data under **SQL Data**. You can also open the following methods:
 - **SQL Data**
 - **SQL Data** (SQL Data)
- **Open SQL**
- In the report content area, you can also select the content to cover selected pages or all pages and also select page numbers approximately 10 pages.
- To change the content of the report, select the data only from pages. **Open SQL** select an appropriate percentage with data and then **Open SQL**.
- **Open SQL**. If you want to open the report, the **Open SQL** report will be open with specific pages in the report.
- **Open SQL**. If you want to open the report, the report content selected about 10 pages from the report. From the **Open SQL** report, you can also select.
- **Open SQL**. If you want to open the report in a table, the default report content will open in the table, with the report selected. If you want to open in the report content area, select **Open SQL**.
- When you have finished working with the report, select **Open**.

Exercises

Exercise 1

Open the web browser for assessment changes. Check the change made to assessment capabilities during the web test.

Exercise 2

Open the web browser for user and group changes. Check the change made to user roles during the web test.

Discussion

- 1. How will you decide which parts of the Storage and Governance should have access to?
- 2. Will somebody at the hospital be responsible for automatically monitoring Security Storage with user?
- 3. Which user should be allowed to the application user?
- 4. How will you give user who need access to both the Storage and Healthcare Storage? (We should keep in mind that user can only belong to one group and rights for Healthcare Storage cannot be granted to individuals.)
- 5. Will your payment policy be decided by hospital policy?

End of Module

• • •

Appendix A: Security Manager Access Options

Overview

After you give users access to Security Manager, you must grant users the necessary permissions and other features in order to make them available to users.

The Security Manager security center has access to the following sections:

- Overview
- Users/Groups
- Windows Firewall
- Windows Defender
- Windows Security

Users/Groups

The section contains the ability to do the following:

- Create and delete users and groups
- Change the profile of a user or group using the left-hand window
- Change the password or other data of a user

Windows Firewall

The section contains access to the form in the **Windows Firewall Settings** window in Security Manager. It contains the ability to create, edit and delete user-defined rules, rule groups and rules.

Applications

The section contains the ability to set access to each of the listed applications. The applications are not then listed as those installed at your site. For example, if the Security Manager tool is not installed, the group being configured will not be able to use Security Manager to manage Security Manager access rights to any group.

Note that unless you want to grant the same access to all Security Manager functions, it may not make sense to give the group the ability to set access rights for Security Manager. Doing so would allow this person to give himself or herself all rights to Security Manager.

Signon Parameter Access

This check box controls the ability of Security Manager users to open the Signon Parameter window.

OverGroup Audit Trail

This check box controls the ability of Security Manager users to open the OverGroup Audit Trail.

Appendix B: OR Manager Access Options

Overview

After you give users access to iM Storage, you must grant access to various user data sources in order to make them available to apps.

The iM Storage security model has six data sources, as follows:

- Mail Store
- Calendar
- Contact Information List
- Task Queue
- Personal Mail List
- Shared Mail
- Mailbox

Tab: Menu Items

The Menu Items tab controls access to all of the menu, sub-menu, and sub-menu items in All Manager. In addition, it controls access to all of the facility settings.

Facility

This section is the master control for your facility settings. Enabling or disabling a facility controls whether all other settings in Security Manager for logging or user access at that facility. For example, you can give a user read access to the logging console, but not to the facility settings console or not enabled, and still not be able to write with or view logging from that console.

Menu Items

This section controls access to all of the menu and sub-menu items in All Manager.

Note that some of the items are "master settings" that control access to all of the items of the menu below them. The master setting is not enabled, the user will have no access to the items below it, regardless of what items are enabled. For example, the "Log View Menu Item" is the master setting for the Log View menu. If it is not enabled, the group will have no access to the items in the Log View menu, regardless of whether or not they are enabled.

These are the master settings:

- The "Log View Menu Item"
- Logging Options
- User Access Options
- Tools - Tools
- Maintenance - Maintenance
- Platform Inventory - Platform Inventory Options

- **Security: Security**
- **Database: Database**
- **Workspaces: Workspace: View**

Note: some functions available in some workspaces might also be available from other workspaces. To be sure that you are selecting modes in either functionality, you should check the settings in the other workspace.

Database

The database has three types of user access permissions:

- **Insertion** - Allows the group to add new database entries and to add existing ones by creating the **ADD** and **ADD** buttons in the database window in **DB Manager**.
- **Update** - Allows the group to update database entries by creating the **UPDATE** button in the database window in **DB Manager**.
- **Delete** - Allows the group to delete database entries by creating the **DELETE** button in the database window in **DB Manager**.

Even with all access enabled, the group can still view the contents of every database. If you want to make groups that adding, deleting, and you must enable the Database entry under View: View.

Tab: Scheduling

The Scheduling tab enables user and group access to various tasks, options, and MFT user scheduling activities.

Options

The options controls access to each of user scheduling options available. Check the selected options to enable them for the group.

MFT Users

The options controls access to each of user MFT user schedules. Check the selected users to enable them for the group.

Group Scheduling

The options controls access to the buttons in the Group Scheduling option window.

Group MFT Scheduling

The options controls access to the buttons in the Group MFT Scheduling option window.

External Reports

The options controls access to the Scheduling and MFT Scheduling under External Reports.

The options controls only scheduling and scheduling external reports. The ability to view external reports via MFT Manager is controlled by the External Report user selection in the External Reports section of the User Roles tab.

Security Groups

Tab: Conflict Override/Prof Card

To use the Conflict Override/Prof Card tab you must have the ability to override conflicting conflicts, storage Preference Cards, and run external reports.

Conflict Override

The action controls the Conflict Override ability to override various conflicts when creating reports.

Storage Preference Cards

The action controls access to the buttons on the Storage Preference Cards screen.

External Reports

The action controls access to the Preference Card under External Reports.

The action controls only accessing and running external reports. The ability to run external reports via API Storage is controlled by the External Report Card action in the Preference Card of the Menu - Store tab.

Tab: Case Records

Case ID	Case Name	Case Type	Case Status	Case Date
12345	Case 1	General	Open	2023-01-01
12346	Case 2	General	Closed	2023-01-02
12347	Case 3	General	Open	2023-01-03
12348	Case 4	General	Open	2023-01-04
12349	Case 5	General	Open	2023-01-05

This tab contains all records and all group records in all of the case record sections.

Manage Case Records

This section contains access to the buttons in the Manage Case Records options window.

Case Record Sections

This section contains access to each section of the case record.

The case sections are mutually exclusive. That is, you can only choose one.

- All gives the group full edit rights to case sections of the section in type. The closed case, the full edit button gives them this access.
- All gives them this access to all sections regardless of type or closed status.
- None gives no access to any sections regardless of type or closed status.

The case record sections are mutually exclusive, you can choose one, with, or without.

- Open allows the group to type a section in a case that does not have a status of closed.
- Close allows the group to close a section.

Closed sections can be opened only if the case record has a status of In Progress.

Case Record New Section Specific

This section contains access to the buttons in the Case Record window. These will be available for the following options:

- **Completed Case:** Enables the **Change Case Status** option for a finished case, allowing the user to change the status from **In Progress** to **Completed**.
- **Reopen a Completed Case:** Enables the **Change Case Status** option for **Completed** cases, allowing the user to change the status from **Completed** to **In Progress**.

Related Roles

External Reports

The system controls access to the user-defined external reports.

The application controls only accessing and viewing external reports. The ability to add external reports into **SP Storage** is controlled by the **External Report** user setting in the **Advanced** section of the **Menu** menu tab.

External Records

The system controls access to the user-defined external records.

The application controls only accessing and viewing external records. The ability to add external records into **SP Storage** is controlled by the **External Record** user setting in the **Advanced** section of the **Menu** menu tab.

Tab: General Access

The General Access tab contains configuration options for granting group access as well as options for access to other web portals.

Other User Permissions

The user defines the settings in this section:

Group	Settings
Administrative Users	From the group menu, it is possible to turn off or confirm the group access.
Administrative Users	- From the group menu, it is possible to modify permissions and access rights in the following table settings. - The system user is assigned to the user group.
Administrative Users	From the group menu, it is possible to assign user access rights to the user group in the following table settings. In the User Access Rights table, it is possible to assign user access rights.

Search Criteria

This section contains the user requirements for patient searches in the following table. By selecting one or more options, you will specify that the patient is in the database. The user must specify one of the following:

- The user must specify the following table settings: **User Access Rights**.
- The user must specify the following table settings: **User Access Rights**.

- No restrictions, meaning that the user can enter either name, with the only rule of 100% letters and 0-9 or 100%

Answer: 100%

Exercise

The table contains the weights in the weights

Group	Weight
100%	How the group works in other words is 100% and 100% 100%
100%	How the group works in other words

Tab: SmartTrack

This tab is used to specify security operations for the optional SmartTrack application.

- Use the left pane to give each device its unique Tracking Instance, SmartTrack, and SmartTrack.
- Use the right pane in the SmartTrack Instances section to set the level of access for each instance.
- Use the SmartTrack section to specify a set of rules that the smart user. These rules are the rules in the SmartTrack Mapping section.

Appendix C: SmartTrack Access Options

Overview

After you give users access to OneDrive, you must grant access to various user data features in order to make them available to apps.

The OneDrive security center contains the following tabs:

- Overview
- Users
- Service Issues
- App Management
- Groups
- All Apps
- Apps
- Audit

Tab Menu

The Menu tab contains access to all menu and sub-menu commands in the application.

Some items in the Menu are "enable sensitive" that either enable or all of the items in the menu when they are. If a menu item is not selected, the user will not be able to use the item unless it is selected. If a menu item is selected, the user will not be able to use the item unless it is selected. If a menu item is not selected, the user will not be able to use the item unless it is selected. If a menu item is selected, the user will not be able to use the item unless it is selected.

Here are the menu items:

- File Menu
- Edit Menu
- View Menu
- Tools Menu
- Window Menu
- Help Menu
- Application Menu
- Custom Menu

Tab: General Access

The General Access tab is used to set the following options:

- The departments in which the system can be used
- The system can be used by the system
- The system can be used by the system

Note that the system can be used by the system is controlled by the system's compatibility with the system's system.

Tab: Bed Mgmt

The Bed Management tab is used to add, delete, and modify bed types and codes. The bed types are listed in the left column, and the bed codes are listed in the right column. The bed codes are listed in the right column, and the bed types are listed in the left column. The bed codes are listed in the right column, and the bed types are listed in the left column. The bed codes are listed in the right column, and the bed types are listed in the left column.

Here are the bed types:

- [Bed Management - New](#)
- [Bed Management - Edit](#)

Tab Transport

The Transport tab also enables to enable and disable each of several modes of audio transport.

Tab: Macro

The Macro dialog is used to specify the macros available in the group.

The Macro dialog also allows the user to select a set of macros from the group. The Macro dialog will set up the Macro dialog, allowing the user to select the macros that are not selected in the dialog. If the Macro dialog is selected.

Table Reports

The Reports tab controls access to any third-party reports the reporter has created.

Appendix D: Quality Manager Access Options

Overview

After you give users access to Security Manager, you must grant access to various web sites and other resources in order to make them available to users.

The Security Manager security center has two sections for Database Access and is split, as shown:

- Main Menu
- Manage/Access
- User List
- Resources
- Resources
- Groups

Database Access

It also may be more than one Security Manager database. Users may need to access some databases and not others, or they may need to access certain features in some databases and not others. Such access is set up in the Database Access and User Database sections. The User Database section is only available when you have more than one database.

The Database Access section contains the master settings for the database. Check the database you want to grant access to.

In the User Database section, assign the database to which you are setting up security rights for the group. The user section is another database if you have a group configuration.

Tab: Menu Items

This page controls access to all of the menu, sub-menu, and sub-submenu in Quality Manager. In addition, it controls access to all of the toolbar buttons.

Menu Items

This section controls access to all of the menu and sub-menu items in Quality Manager.

Each item under all the items are "menu controls". Each control controls to all of the items of the menu items. If a menu control is not selected, the user will have no access to the menu items. If a menu control is selected, the user will have access to the menu items. For example, the "File" menu item is the menu control for the "File" menu. If it is not selected, the group will have no access to the items of the "File" menu. If it is selected, the group will have access to the items of the "File" menu. If a menu control is not selected, the user will have no access to the menu items.

Here are the menu controls:

- File - Open New Menu Item
- File - Save
- Window - Window
- Window - Other Window
- Window - Other Window Page
- Report - Report
- Report - Standard Report
- Report - Standard Report Page
- Document - Document

Summary

Security Tools

The system has three types of user access permissions:

- **Read** - Allows the group to get new documents within and to get existing ones by creating the **get** and **list** entries in the document index in **DB Storage**.
- **Write** - Allows the group to create documents within by creating the **create** entry in the document index in **DB Storage**.
- **Drop** - Allows the group to delete documents within by creating the **drop** entry in the document index in **DB Storage**.

Even with all access enabled, the group can still view the contents of any document. If you want to make groups that editing documents, you must enable the document entry under **Write** too.

Tab: Manage Search

The Manage Search tab enables users to work with data in various ways.

Users can use the tab to view all data, search for data, or filter data. Users can also use the tab to view data in a grid, or to view data in a list. Users can also use the tab to view data in a map, or to view data in a chart.

Tab: Case Edit

Case ID	Case Name	Case Type	Case Status
12345	Case 1	Case Type 1	Case Status 1
67890	Case 2	Case Type 2	Case Status 2
11111	Case 3	Case Type 3	Case Status 3
22222	Case 4	Case Type 4	Case Status 4

You can use the Case Edit tab to edit cases in various ways.

Click the Case Edit tab to the right of the Case Edit tab. You can use the Case Edit tab to edit cases in various ways. You can use the Case Edit tab to edit cases in various ways. You can use the Case Edit tab to edit cases in various ways.

Give group access to Security Manager categories

1. Select a type of Security Manager feature that you want to give the user access to. The list changes depending on the type of feature you choose.
2. Select the items or users from the list that you want to give the group access to, checking the appropriate boxes.
3. If no items or users are checked, all are selected. When you start checking items, only the checked items are selected.
4. The items selected in the categories appear in the **What the Users See** box.

Workaround Case Restrictions

You can use the **Workaround Case** tool in this section to restrict groups from accessing cases with different characteristics, while you can use the **Search Case** tool to restrict group members from accessing cases of their own making.

- Restrict user from cases with these values
- Restrict user from cases that are this resolved
- Restrict user from cases that are this assigned
- Restrict a group's users to their own created cases

Tab Worksheets

The **Worksheet Function** group on the **Formulas** ribbon is used to insert a function into a worksheet, and when that happens, it opens the **Insert Function** dialog box.

If you click on **Worksheet Function**, then the group box for all functions is all worksheets.

If you want to restrict the group to only certain worksheets, specify those worksheets in the **Worksheet Function** box. The group box for all functions is the selected worksheets and is shown.

To assign a list of functions to the worksheets in the **Worksheet Function** box, use the **Worksheet Function** box. The list of worksheets you can add to the **Worksheet Function** box is shown in the **Worksheet Function** box.

After adding a worksheet to the **Worksheet Function** box, a selection of cells within appears in the **Worksheet Function** box, allowing you to select cells. This is then used to select specific cells and then in the worksheet.

Tab: External

Source: SAP

You can use the External tab to manage accounts in External Reports and External Forms.

If none of the items are checked, the group has unrestricted access to all External Reports or Forms. When a user is checked, then the group's access to the report or form is restricted to only those that are checked.

Appendix E:
Access Options for Anesthesia-, Preop-,
PACU- and Critical Care Manager

[illegible]

Prescription and Validation Rights

March 2019

Under Quebec Rights, which are the same for all hospitals, the list of prescription and validation rights can be well defined in French and in the other languages. (See "Prescription and Validation Rights Inventory" on page 32.)
